

**Desert Endocrinology  
Thyrogen-Stimulated Thyroglobulin  
Patient Information**

**Purpose:**

This study is designed to check for recurrence of thyroid cancer. It is not necessary to stop your thyroid hormone.

**Schedule:**

- Monday            Come in to the office for your first intra-muscular injection of Thyrogen to be administered by the Medical Assistant.
- Tuesday           The final injection of Thyrogen will be administered approximately 24 hours after your first injection.
- Friday             Go to the laboratory to have your blood drawn.

We will order your Thyrogen after it is authorized. It is usually delivered to our office, but sometimes insurance requires it be delivered to you. We will contact you to schedule your injections after the Thyrogen has been shipped.

**Please do not try to alter this schedule because it may invalidate the results of the study.**

Please call the office with any questions you may have.
